

## Window Restrictor.

### Operating instructions.

When engaged the restrictor can be left in one of two positions.

1. Push button to release.
2. Dead locked.

**Push button to release:** 

Ensure the key slot is at 90 degrees to the lock body. This enables the cable bullet to be withdrawn when the key button is depressed.

**Dead locked:** 

Insert and turn the key a further 90 degrees so the key button slot is in line with the lock body, withdraw the key.

The bullet may be inserted before or after this action. The restrictor is now dead locked.

*Please note: The locking part may be fitted onto the opening sash or frame, site conditions and personal preferences dictate.*

### **Cylinder lock in the Push to Release position.**
