

Hit & Miss

Variable Opening Ventilator

Suitable for PVCu, Aluminium and Timber

The Titon Hit & Miss Ventilator provides a simple and effective solution for background ventilation in aluminium, timber or uPVC window systems.

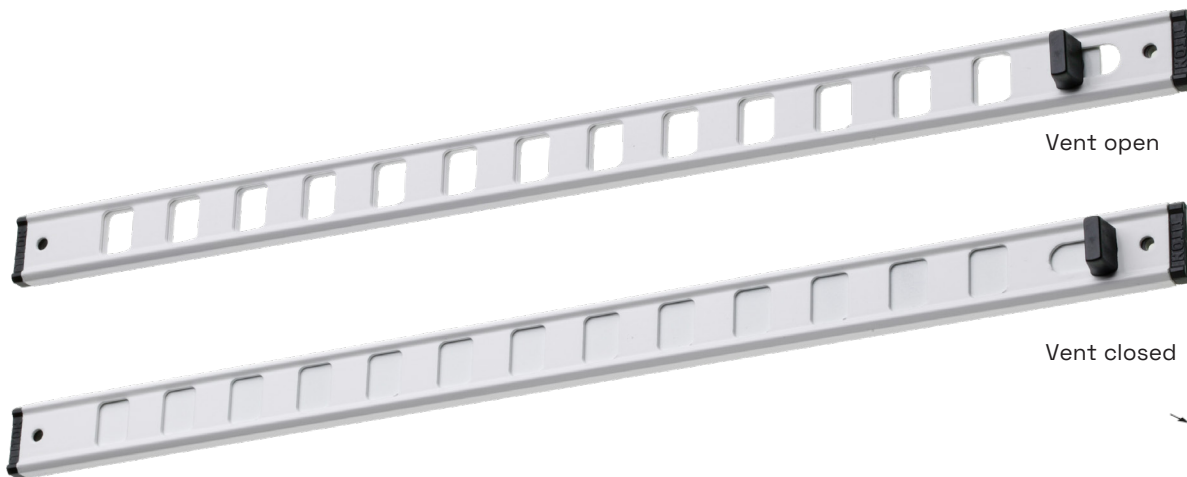

Designed to fit neatly over a 16mm slot, it delivers controlled airflow while maintaining the security and integrity of the window. The ventilator features a durable external canopy with integrated mesh, helping to prevent the ingress of rain and insects while still allowing fresh air to circulate naturally.

Manufactured in four standard lengths, the Hit & Miss Ventilator offers flexibility for a wide range of installations and is particularly well suited to retrofit applications where additional ventilation is required. Its high-security design allows windows to remain safely ventilated whilst closed, making it ideal for night ventilation in residential or commercial buildings.

With simple fixing and quick installation, it provides a practical, low-maintenance way to improve indoor air quality.

Features & Benefits

- Fits over 16mm slot
- Canopy with mesh protects against ingress of rain and insects
- Manufactured in four standard lengths
- High security
- Ideal for night ventilation
- Simple fixing
- Available air openings quoted are for vent and canopy combination
- Ideal for retro-fit applications
